

**Afton Solar Regional Mitigation Strategy
Public Webinar, September 28, 2016
Questions to Consider When Commenting**

1. Has the BLM adequately captured the concerns regarding the initial resource impact evaluation that were voiced in the May workshop?

2. Are there additional resources that should warrant regional mitigation? Please provide a justification.

3. Are there resources included in the list of those warranting regional mitigation that can be addressed with onsite mitigation? Please include examples of onsite mitigation actions to address the impact.

4. Do the regional goals and objectives presented by BLM adequately address the unavoidable or residual impacts of solar energy development that may warrant regional mitigation for the SEZ?

5. Are there other established regional goals and objectives beyond those presented (e.g., from state action plans, species-specific management plans, etc.)?

6. Are the mitigation desired outcomes sufficiently defined to support identification and assessment of candidate mitigation sites and actions for the SEZ?
